

Assignment #2 - Advanced CSS (Flexbox & Grid)

Name: Nursultan Nurislam **Group:** SE-2538

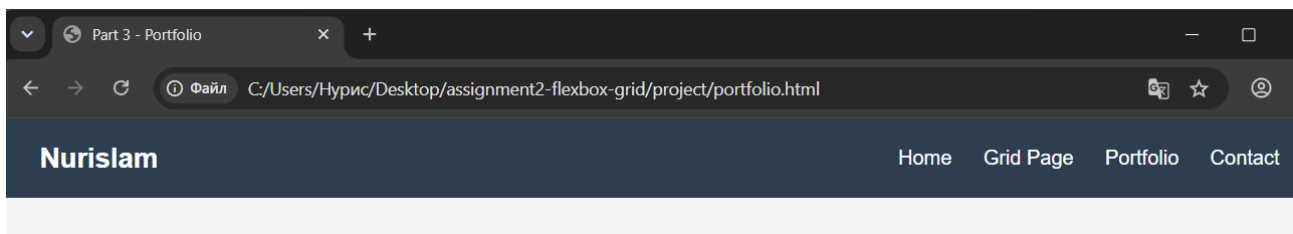

About the project

This project is my second front-end assignment. The goal was to practice Flexbox and CSS Grid by building a navigation bar, a row of cards, a page layout with grid areas, an image gallery, and a portfolio page that combines both Flexbox and Grid.

Part 1. Flexbox

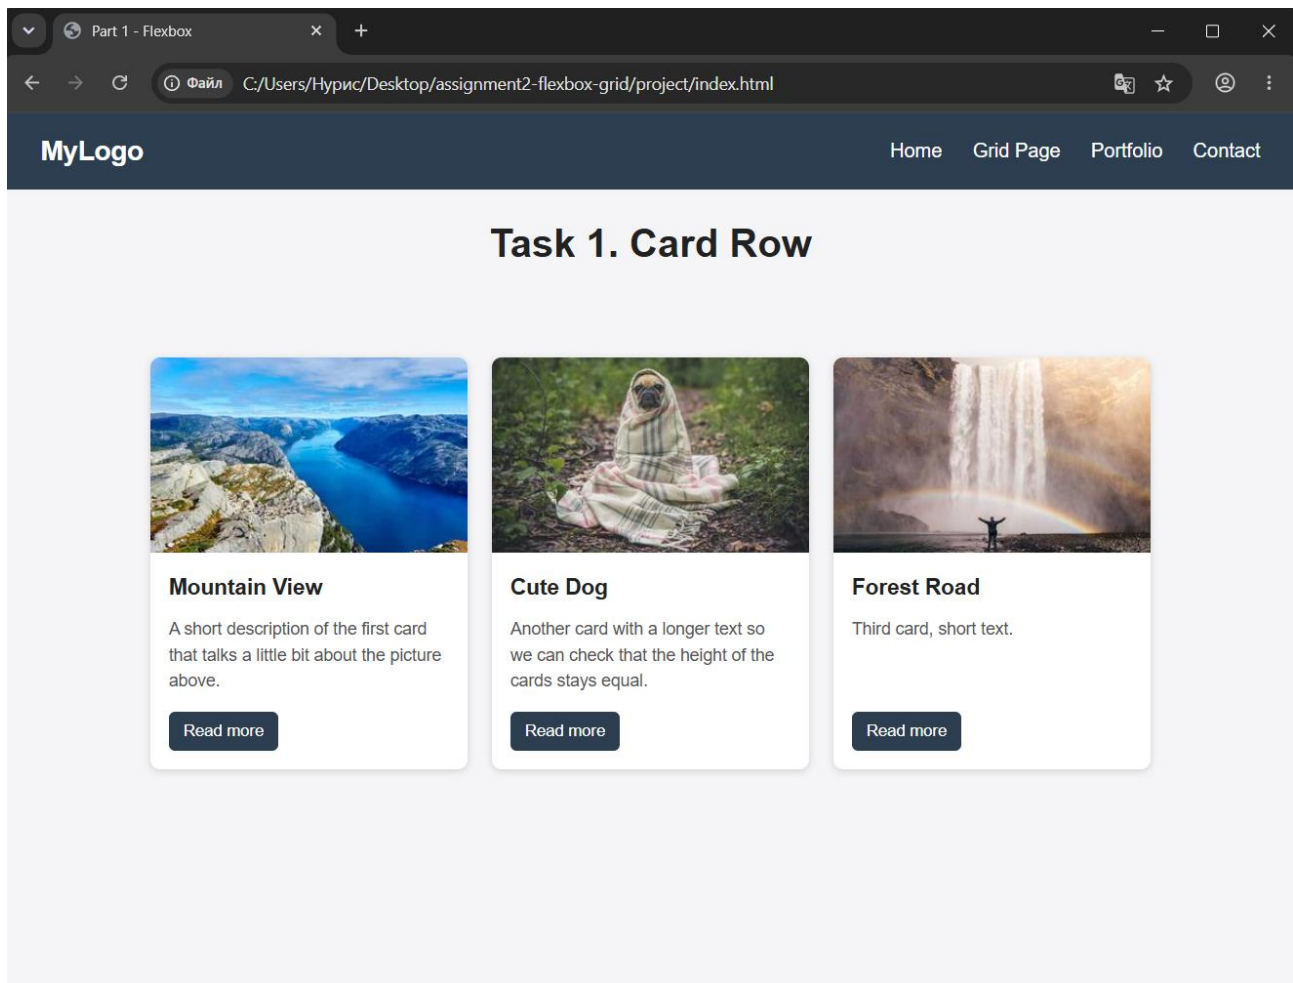

Task 0. Navigation Bar

Header with a logo on the left and a list of links on the right. The header is a flex container, links are spaced with `gap` and everything is centered vertically with `align-items: center`.

Task 1. Card Row

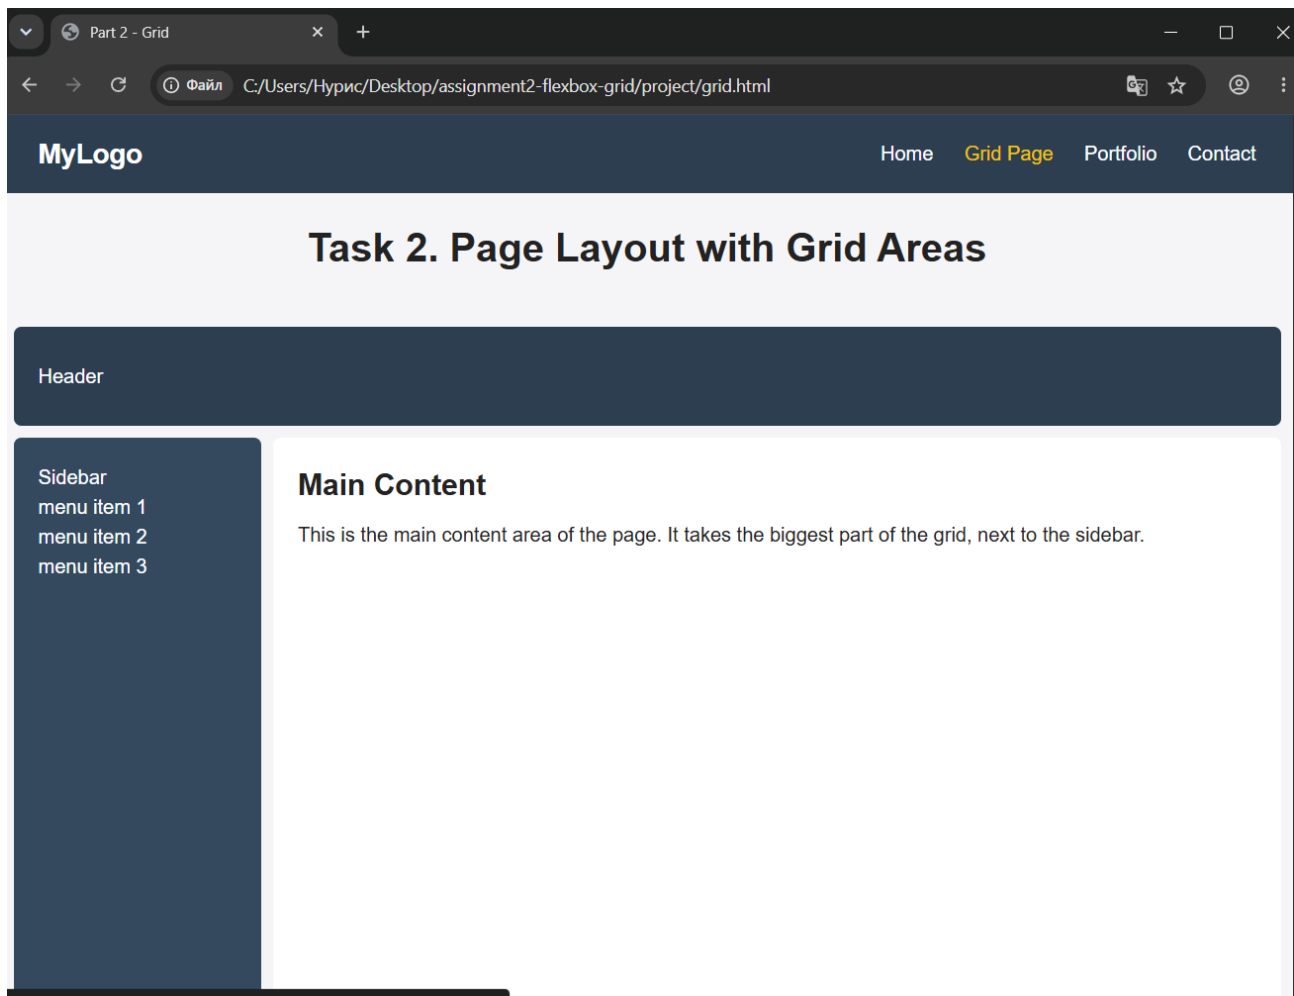

Three cards in a row, each one has an image, a title, a text and a button. The card container is a flex container with `gap` between cards. All cards stretch to the same height because of `align-items: stretch`, and a small hover effect lifts the card up.

Part 2. Grid System

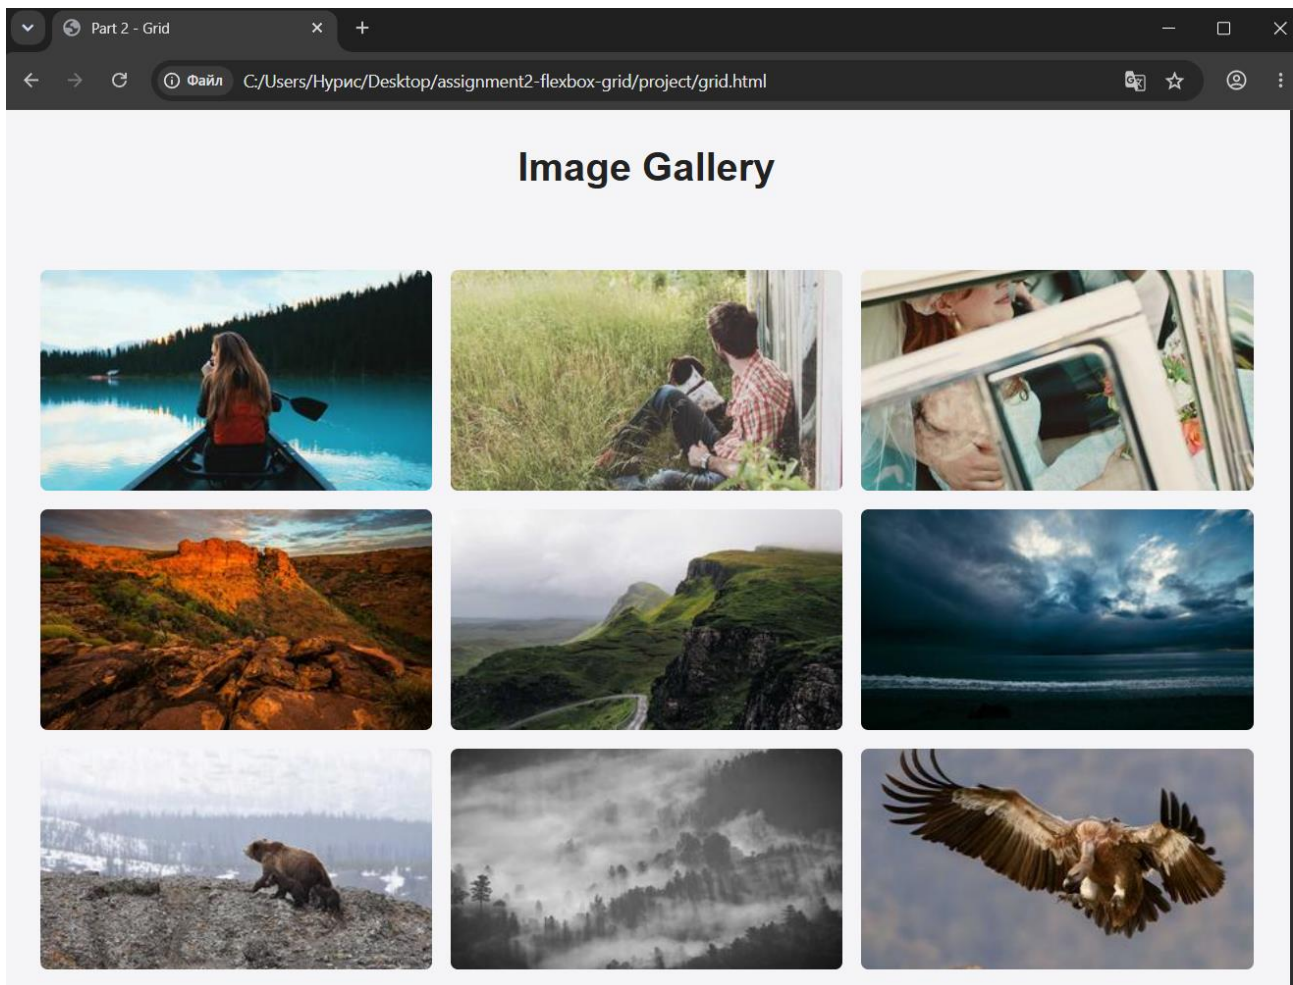

Task 2. Page Layout with Grid Areas

A layout with header, sidebar, main content and footer, built using `grid-template-areas`. The header spans the whole top, the sidebar takes the left side, the main content is on the right, and the footer spans the whole bottom.

Task 3. Image Gallery

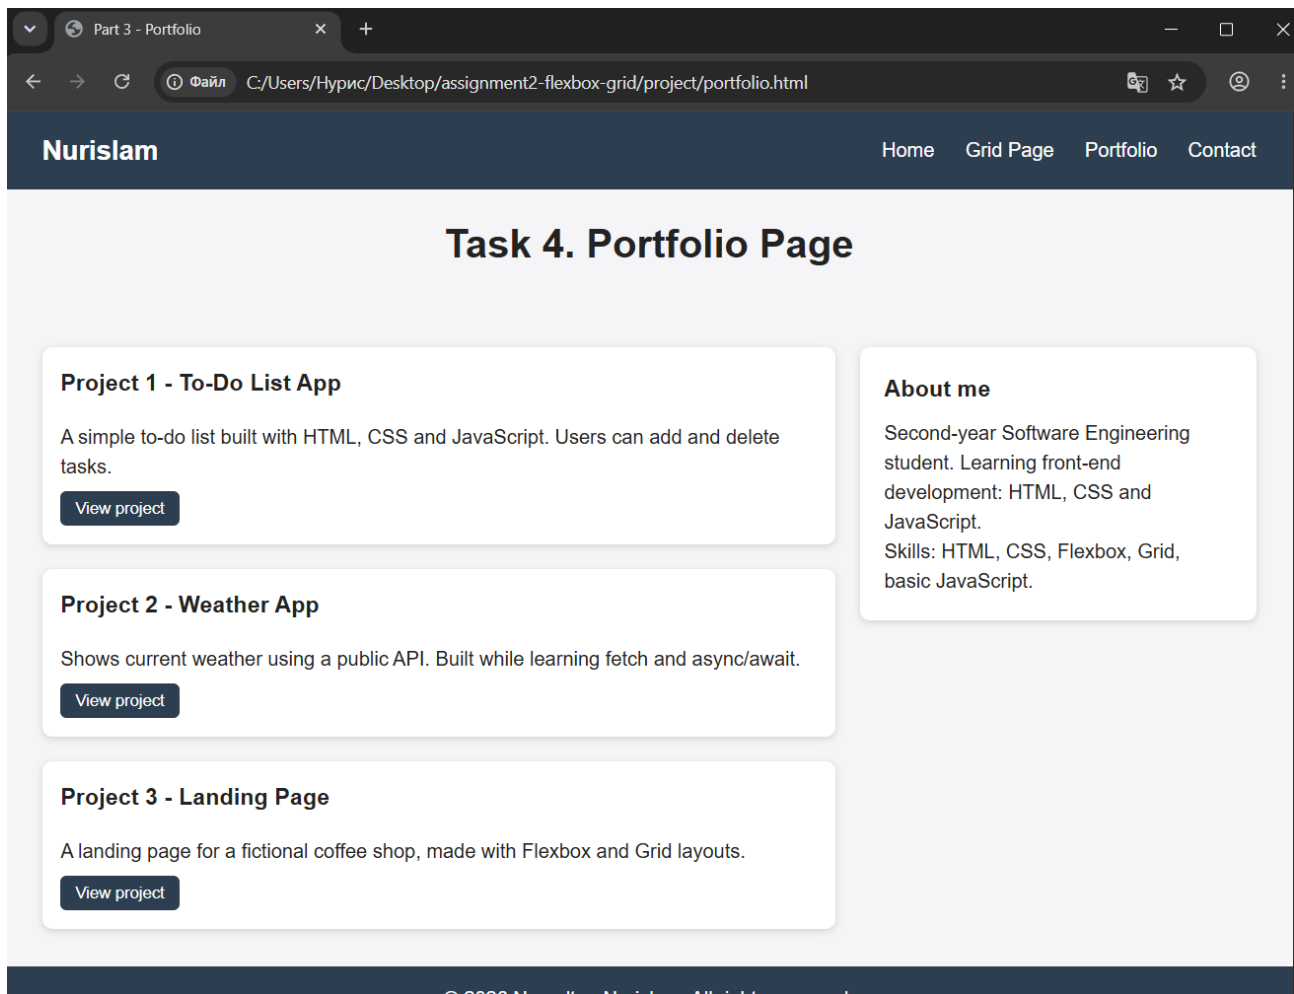

Nine images placed inside a grid container with three equal columns and gaps between them. When you hover over an image, a caption appears on top of it.

Part 3. Combining Flexbox & Grid

Task 4. Portfolio Page

The portfolio page has a header (Flexbox navigation, same as before), a main section built with Grid (project cards on the left, an "about me" sidebar on the right), and a footer at the bottom. Inside every project card Flexbox is used again to arrange the title, description and button in a column.

Summary of my work process

I started with the navbar and the card row because they only needed Flexbox. After that I moved to the grid layout task, where the hardest part for me was getting `grid-template-areas` to line up correctly with the sidebar and footer - I had a couple of mistakes with column sizes at first. Then I made the image gallery, which was easier since it's basically the same grid idea repeated for more items, plus a hover caption with `opacity`.

The last task was the portfolio page, where I had to combine everything from the previous tasks: Flexbox for the navbar and inside each project card, and Grid for the two-column main section. Overall this assignment helped me actually understand the difference between when to use Flexbox (one direction, simpler alignment) and when Grid is more useful (two-dimensional layouts like the whole page).
